

OrderFlow VPS Database Restoration Guide

Official DevOps & Infrastructure Handover Document

Production Database: 23,371 Records | 48 Tables

1. Upload Database Backup to VPS

From the local machine (PowerShell / Terminal), copy the complete backup file to the VPS `/tmp` directory:

```
scp neon_db_backup_complete_with_schema.sql root@<YOUR_VPS_IP>:/tmp/neon_db_backup_complete_
```

2. Database Restoration Commands (Run on VPS)

SSH into your VPS as `root` and execute the following commands:

```
# Step A: Ensure target database exists
sudo -u postgres createdb orderflow_prod 2>/dev/null || true

# Step B: Restore the complete database schema, types, indexes, and data
sudo -u postgres psql -d orderflow_prod -f /tmp/neon_db_backup_complete_with_schema.sql

# Step C: Ensure pgcrypto extension is active & set Super Admin password to admin123
sudo -u postgres psql -d orderflow_prod -c "CREATE EXTENSION IF NOT EXISTS pgcrypto; UPDATE

# Step D: Ensure Owner Admin account is active & reset password to admin123
sudo -u postgres psql -d orderflow_prod -c "UPDATE users SET password_hash = crypt('admin123

# Step E: Ensure Maintenance mode is turned OFF
sudo -u postgres psql -d orderflow_prod -c "UPDATE platform_settings SET maintenance_mode =
```

3. Restart Application Services

After the database is restored, restart the backend APIs:

```
cd /var/www/orderflow

# Restart PM2 processes
pm2 restart all
```

✓ 4. Verification & Health Check

Run these queries on the VPS to verify all production data was restored successfully:

```
sudo -u postgres psql -d orderflow_prod -c "  
SELECT  
  (SELECT count(*) FROM businesses) AS total_businesses,  
  (SELECT count(*) FROM users) AS total_users,  
  (SELECT count(*) FROM products) AS total_products,  
  (SELECT count(*) FROM orders) AS total_orders,  
  (SELECT count(*) FROM invoices) AS total_invoices,  
  (SELECT count(*) FROM customers) AS total_customers;  
"
```

🎯 Expected Row Counts:

- **total_businesses:** ~17
- **total_users:** ~15
- **total_products:** ~2,284
- **total_orders:** ~489
- **total_invoices:** ~237
- **total_customers:** ~80

🌐 5. Test Live Login Endpoint

```
curl -X POST https://obix360.com/auth/login \  
-H "Content-Type: application/json" \  
-d '{"email":"admin@orderflow.com","password":"admin123"}'
```
